PREFACE

This report presents statistics on the number of inhabitants of the State, its counties, and minor civil divisions (townships, etc.). In addition, separate figures are also presented for urban places, wards of cities of 5,000 or more, and other areas of the State. These data are based upon tabulations from the Seventeenth Decennial Census of the population of the United States, its Territories, and possessions conducted as of April 1, 1950. Provision for the Seventeenth Decennial Census was made in the act providing for the Fifteenth and subsequent decennial censuses which was approved on June 18, 1929.

The major portion of the information compiled from the Census of Population of 1950 will appear in Volume I, *Number of Inhabitants*, and in Volume II, *Characteristics of the Population*. This report is a preprint of Chapter 24 (Mississippi) of Volume I, which is to present, in a single publication, statistics on the number of inhabitants for each State.

The materials presented here will also appear as Chapter A of Part 24 (Mississippi) of Volume II. Volume II will comprise a series of separately published parts, one for each State and a summary for the United States. The use of separate parts makes the basic materials on characteristics of the population for a given State available to the public in a single publication. Within the part for a State, Chapter A will recapitulate the statistics on the number and distribution of the population within a State; Chapter B will present statistics on the general characteristics of the population of the various political subdivisions of the State, such as counties, incorporated places, and the like; and Chapter C will present data on the detailed characteristics of the population of the larger areas within the State, such as cities of 100,000 inhabitants or more and standard metropolitan areas.

The materials presented here were prepared under the supervision of Howard G. Brunsman, Chief, Population and Housing Division, and Dr. Henry S. Shryock, Jr., Assistant Chief for Population Statistics, by Dr. Henry D. Sheldon, Chief, Demographic Statistics Section, and Charles P. Brinkman, Chief, Population Distribution Unit; the compilation of the statistics was under the direction of Robert B. Voight, Assistant Chief for Operations. The collection of the information on which these statistics are based was under the supervision of Lowell T. Galt, Chief, Field Division. The geographic work, including the delineation of special types of urban territory and the preparation of maps, was under the supervision of Clarence E. Batschelet, Chief, Geography Division.

Succeeding volumes will cover the following subjects:

Census Tracts, Nativity and Parentage, Nonwhite Population by Race, Persons of Spanish Surname, Institutional Population, Differential Fertility, Labor Force Characteristics, Occupation, Industry, Income, Internal Migration, Education, Characteristics of Families and Households.

U. S. CENSUS OF HOUSING: 1950

Volume

- I General Characteristics
- II Nonfarm Housing Characteristics
- III Farm Housing Characteristics
- IV Residential Financing
- V Block Statistics

Housing statistics for census tracts are to be included in the Population reports on census tracts.

MISSISSIPPI

Number of Inhabitants

The State.—Mississippi was organized as a Territory in 1798, at which time it included territory now comprising the south central parts of Mississippi and Alabama. The area of the Territory was increased in 1804 by the addition of land now comprising the northern parts of Mississippi and Alabama. Its area was further increased in 1812 by the addition of the extreme southern portions of the present States of Mississippi and Alabama. In 1817 the eastern part of the Territory was taken to form the Territory of Alabama, and Mississippi was admitted to the Union as the twentieth State with boundaries substantially as at present. Its population on April 1, 1950, according to the Seventeenth Census, was 2,178,914. The State has a land area of 47,248 square miles. In 1950 as in 1940 there was an average of 46.1 inhabitants per square mile. Among the States, Mississippi ranked twenty-sixth in population and thirtieth in land area.

In 1820, the first year in which it was enumerated as a State, Mississippi had a population of 75,448 (table 1). In 1950, 130 years later, the population was nearly 29 times as large. Growth was rapid in the nineteenth century, with the 1900 population of 1,551,270 more than 20 times the 1820 population. In the twentieth century, the State lost population in two decades. The decennial changes ranged from a loss of 6,496 between 1910 and 1920 to a gain of 245,844 for the previous decade. The loss of 4,882 between 1940 and 1950 represented a decline of 0.2 percent from the 2,183,796 persons enumerated in 1940.

Usual place of residence.—According to usual Census practice, which dates back to 1790, each person enumerated in the 1950 Census was counted as an inhabitant of his usual place of residence or usual place of abode, which is generally construed to mean the place where he lives and sleeps most of the time. This place is not necessarily the same as his legal residence, voting residence, or domicile, although, in the vast majority of cases, these different bases of classification would be identical.

In the application of this rule, persons were not always counted as residents of the places in which they happened to be found by the census enumerators. Persons in places where guests usually pay for quarters (hotels, etc.) were enumerated on the night of April 11, and those whose usual place of residence was elsewhere were allocated to their homes. Visitors found staying in private homes, however, were not ordinarily interviewed there. Information on persons away from their usual place of residence was obtained from other members of their families, landladies, etc. If an entire family was expected to be away during the whole period of the enumeration, information on it was obtained from neighbors. A matching process was used to eliminate duplicate reports for persons who reported for themselves while away and were also reported by their families at home.

Persons in the armed forces quartered on military installations were enumerated as residents of the States, counties, and minor civil divisions in which their installations were located. Members of their families were enumerated where they actually resided. In the 1950 Census, college students living away from home were considered residents of the communities in which they were residing while attending college, rather than as persons temporarily

absent from their parental homes as was the practice in 1940. In 1950 the crews of vessels of the American Merchant Marine in harbors of the United States were counted as part of the population of the ports in which their vessels were berthed on April 1, 1950. In 1940 such persons were treated as part of the population of the port from which the vessel operated. Inmates of institutions, who ordinarily live there for long periods of time, were counted as inhabitants of the place in which the institution was located; whereas patients in general hospitals, who ordinarily have short stays, were counted at, or allocated to, their homes. All persons without a usual place of residence were counted where they were enumerated.

Urban and rural population.—The 1950 urban population of Mississippi comprised 607,162 persons, or 27.9 percent of the population of the State (table 1). This population was living in the 54 urban places in the State and in other territory included in the urban fringe of the Jackson Urbanized Area. Nearly one-half of the urban population was living in the seven cities of 25,000 inhabitants or more in the State (table 2).

The rural population of Mississippi numbered 1,571,752 persons, or 72.1 percent of the population of the State (table 1). Of the rural population, 115,827 persons, or 7.4 percent, were living in the 64 incorporated places and 8 unincorporated places of 1,000 to 2,500 inhabitants (table 2).

Urban definition.—Under the urban definition established for use in the 1950 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, towns,¹ and villages; (b) the densely settled urban fringe, including both incorporated and unincorporated areas, around cities of 50,000 or more; and (c) unincorporated places of 2,500 inhabitants or more outside any urban fringe. The remaining population is classified as rural. According to the urban definition used in previous censuses, the urban population comprises all persons living in incorporated places of 2,500 inhabitants or more and areas (usually minor civil divisions) classified as urban under special rules relating to population size and density.

In both definitions, the most important component of the urban territory is the group of incorporated places having 2,500 inhabitants or more. A definition of urban territory restricted to such places, however, would exclude a number of equally large and densely settled places, merely because they were not incorporated places. Under the old definition, an effort was made to avoid some of the more obvious omissions by the inclusion of the places urban under special rules. Even with these rules, however, many large and closely built-up places were excluded from the urban territory. To improve the situation in the 1950 Census, the Bureau of the Census set up, in advance of enumeration, boundaries for urban-fringe areas around cities of 50,000 or more and for unincorporated places outside urban fringes. All the population residing in urban-fringe areas and in unincorporated places of 2,500 or more is classified as urban according to the 1950 definition. (Of course,

¹ Except in New England, New York, and Wisconsin, where "towns" are minor civil divisions of counties and are not necessarily densely settled centers like the towns in other States.

the incorporated places of 2,500 or more are urban in their own right.) Consequently, the special rules of the old definition are no longer necessary.

According to the 1950 urban definition, the urban population of Mississippi included the following components: (1) The 601,772 inhabitants of the 53 incorporated places of 2,500 inhabitants or more; (2) the 3,400 inhabitants of Mississippi City-Handsboro, the only specially delineated unincorporated place of 2,500 inhabitants or more; and (3) 1,990 inhabitants living in unincorporated territory in the urban fringe of the Jackson Urbanized Area. Since there were no places classified as urban under special rule in Mississippi under the old definition, the population of the incorporated places of 2,500 inhabitants or more comprised the urban population under the old definition. The population of the remaining elements—5,390—represents the gain in the urban population which resulted from the change in definition.

Although the Bureau of the Census has employed other definitions in the course of its history, the statistics on the population by urban and rural residence for the years 1800 to 1940 are shown in accordance with the 1940 definition. The 1950 statistics are shown in accordance with both the new and old definitions.

Trends of urban and rural population.—Trends in the urban and rural population can be examined only on the basis of the old definition. On this basis, the urban population of Mississippi in 1950 was 601,772, or five times as large as the 1900 urban population of 120,035 (table 1). Between 1940 and 1950 the urban population increased by 168,890, or 39.0 percent, over the 432,882 persons enumerated as living in urban territory in 1940. All 15 of the cities of 10,000 inhabitants or more in the State shared in the increase in the urban population for the decade, with rates of gain ranging from 5.1 percent for McComb to 114.2 percent for Biloxi (table 4). In 1900 there were 41,094 persons living in the 3 cities of 10,000 inhabitants or more in the State; by 1950 there were 419,889 in the 15 cities of this size (table 3). The proportion of the population living in urban territory more than tripled between 1900 and 1950, increasing from 7.7 to 27.6 percent.

In contrast to the steady increase in the urban population 1900 and 1950, the rural population declined in two of the decades. Despite these losses, the rural population increased from 1,431,235 in 1900 to 1,577,142 in 1950 (table 1). The loss of 173,772 between 1940 and 1950 represented a decline of 9.9 percent from the 1940 rural population of 1,750,914. Despite a decline over the 50-year period in the proportion of the population living in rural territory, the population of Mississippi is predominantly rural, with 72.4 percent classified as rural in 1950.

Counties.—The counties in Mississippi ranged in size from Issaquena with a population of 4,966 to Hinds with a population of 142,164 (table 5). Between 1940 and 1950, 23 of the 82 counties in the State increased in population as compared with 72 in the previous decade. All but three of the counties which gained population had also increased in the previous decade. The most rapid rate of increase was experienced in Harrison County, which had an increase of 65.5 percent. The largest numerical increases were recorded in Hinds and Harrison Counties, which had increases of 34,891 and 33,274, respectively. Hinds County also had had the largest numerical increase in the previous decade.

Minor civil divisions.—To the primary political divisions into which counties are divided, the Bureau of the Census applies the general term "minor civil divisions." The minor civil divisions in Mississippi are called beats. The incorporated cities, towns, and villages form subdivisions of the minor civil divisions in which they are located.

Table 6 shows statistics on the population of each county by minor civil divisions for the last three censuses. The population of each incorporated and unincorporated place is shown in *italics* under the population of the minor civil division in which it is located. When an incorporated or unincorporated place lies in two or

more minor civil divisions, the population of the several parts is shown in table 6 in the appropriate minor civil divisions, and each part is designated by "part." Figures on the total population of such places are given in table 7. Unincorporated places are designated by "uninc." Changes between the 1940 Census and the 1950 Census in the boundaries of the areas listed are shown in notes to table 6. For changes in boundaries prior to the 1940 Census, see reports of the Sixteenth Census (1940), *Population*, Vol. I, pp. 570-573, and reports of earlier censuses.

Incorporated and unincorporated places.—In 1950 there were 278 places in Mississippi incorporated as cities, towns, or villages and 9 unincorporated places of 1,000 inhabitants or more. The 225 incorporated places of fewer than 2,500 inhabitants accounted for 175,732 of the 777,504 inhabitants living in incorporated places. Of the 15,964 persons living in unincorporated places, 12,564 were in the eight places of fewer than 2,500 inhabitants. The incorporated places ranged in size from Blodgett town with a population of 5 to Jackson city with a population of 98,271.

Political units recognized as incorporated places in the 1950 Census are those which are incorporated as cities, boroughs, towns, and villages, with the exception that towns are not recognized as incorporated places in the New England States, New York, and Wisconsin.

The Bureau of the Census has delineated boundaries for the thickly settled urban fringe around cities of 50,000 or more and has also delineated boundaries for unincorporated places of 1,000 or more which are densely settled population centers without corporate limits. Although there are unincorporated places within the urban fringe, it was not feasible to establish boundaries for such places and therefore they are not identified as separate places.

The count of urban places in the 1950 Census comprises all incorporated places of 2,500 or more regardless of location and unincorporated places of 2,500 or more which are located outside the urban-fringe areas. Incorporated places of less than 2,500 which lie in the urban fringe are not recognized as urban places.

Urbanized areas.—The only urbanized area in Mississippi was the Jackson Urbanized Area, which had a population of 100,261. Of the inhabitants of the area, 98,271 were living in Jackson, the central city of the area, and 1,990 in unincorporated territory included in the urbanized area (table 9).

Each urbanized area contains at least one city with 50,000 inhabitants or more in 1940 or according to a special census taken since 1940, and some urbanized areas contain two or more cities of 50,000. Each urbanized area also includes the surrounding closely settled incorporated places and unincorporated areas that meet the criteria listed in the section below on "Urban fringe." Thus, the territory of an urbanized area may be classified into incorporated parts and unincorporated parts. (See Jackson Urbanized Area Map.)

An urbanized area also may be divided into central city or cities and urban fringe as defined below.

Central cities.—Although an urbanized area may contain more than one city of 50,000 or more, not all cities of this size are necessarily central cities. The largest city of an area is always a central city. In addition, the second and third most populous cities in the area may qualify as central cities provided they have a population of at least one-third of that of the largest city in the area and a minimum of 25,000 inhabitants. The names of the individual urbanized areas indicate the central cities of the areas.

Urban fringe.—The urban fringe includes that part of the urbanized area which is outside the central city or cities. The following types of areas are embraced if they are contiguous to the central city or cities or if they are contiguous to any area already included in the urban fringe:

1. Incorporated places with 2,500 inhabitants or more in 1940 or at a subsequent special census conducted prior to 1950.

2. Incorporated places with fewer than 2,500 inhabitants containing an area with a concentration of 100 dwelling units or more with a density in this concentration of 500 units or more per square mile. This density represents approximately 2,000 persons per square mile and normally is the minimum found associated with a closely spaced street pattern.

3. Unincorporated territory with at least 500 dwelling units per square mile.

4. Territory devoted to commercial, industrial, transportation, recreational, and other purposes functionally related to the central city.

Also included are outlying noncontiguous areas with the required dwelling unit density located within $1\frac{1}{2}$ miles of the main contiguous urbanized part, measured along the shortest connecting highway, and other outlying areas within one-half mile of such noncontiguous areas which meet the minimum residential density rule.

The first of the two main questions which arise in connection with the study of the history of the English language is the question of the origin of the language. It is generally admitted that the English language is a mixture of the Germanic and the Latin languages. The Germanic part of the language is derived from the Old English, which was the language of the Anglo-Saxons. The Latin part of the language is derived from the Latin of the Romans, which was the language of the Celts. The English language is thus a mixture of the Germanic and the Latin languages.

The second of the two main questions which arise in connection with the study of the history of the English language is the question of the development of the language. It is generally admitted that the English language has developed from the Old English, which was the language of the Anglo-Saxons. The Old English language was a mixture of the Germanic and the Latin languages. The English language is thus a mixture of the Germanic and the Latin languages.

¹ According to the new urban definition, the urban population comprises persons residing in urban territory but not necessarily in an urban place, which is defined as an incorporated place of 2,500 or more, or an unincorporated place of 2,500 or more located outside an urbanized area. Under the old definition, incorporated places of 2,500 or more and places urban under special rule are classified as urban places. There were no places urban under special rule in Mississippi.

² Includes 1,990 persons in urban territory outside of urban places.

³ Population of that part of present State included in Mississippi Territory as then constituted. Population of all of Mississippi Territory: 40,352 in 1810, 8,850 in 1800.
